

Take your investigations to new heights.

Easily tackle more complex, bigger data, faster than you ever thought possible.

Your work is challenging. You confront complex information types, constant new sources of data and your evidence processing backlog is ever-increasing. With these technical complexities, it's not always easy to find the highly relevant data to prove your case. **AccessData 6.2®** can help you face these challenges head on, with unbelievable scalability, remarkably fast processing speeds and superior usability.

Whether you need to process data in an investigation or search for and acquire evidence in a criminal case, **AccessData 6.2** delivers the most advanced digital forensic, e-discovery and post-incident analysis solutions.

- Meet the instantaneous data analysis requirements of urgent cases with **speeds that set the standard for forensic processing**—now *4X faster!**
- Face rising case volumes and staggering investigative data sizes with **virtually limitless scalability**—your only limitation is what your hardware allows.
- Connect non-forensic investigators, detectives, lawyers and other users with **a new web interface that delivers significant usability improvements** for better collaboration across teams.

With these leading-edge enhancements to our award-winning products, **AccessData 6.2** meets the widest range of an organization's investigative needs. Take a closer look.

Because of the digital evidence obtained from FTK or other AccessData products, we have had numerous convictions in criminal cases.

— Scott McNamee
Computer Forensic Analyst,
U.S. Department of State

* AD Lab is four times faster as compared to speed increases in version 6.1.

AccessData Forensic Solutions

Recognized around the world as the premier computer forensic software, **Forensic Toolkit® (FTK®)** is a court-cited digital investigations platform that delivers an intuitive interface, email analysis, customizable data views and stability.

Built on the foundation of the FTK platform, **AD Enterprise** enables access to multiple office locations and remote workers across the network. Respond quickly, remotely and covertly, while maintaining chain of custody.

The 6.2 release delivers powerful enhancements across the entire forensics product suite:

- **Parse, review and analyze mobile chats** including WeChat® and WhatsApp® on phone† chat application collections.
- **Cross-reference emails and phone numbers across data types**, and then **filter on the person of interest** in your evidence to connect the dots in your investigation.
- Provide a simplified view of FTK for end users with **new administrator controls**.
- Use **email threading** to save time, gain insights and understand data in the context of a conversation and how it applies to your case.
- **Recognize and parse keyword searches, destination lists, and shellbag, prefetch, volume shadow copy and SAM files** automatically on all modern operating systems.
- **Export KML and KMZ and import your geolocation data** into any application that allows KML imports, including the Google Earth™ mapping service.
- Quickly and easily **save and export your data** and analysis into .CSV or .HTML files.
- **Find deleted partitions easily, in more scenarios**, with the highly requested expanded support for partition types.

AD Lab is a centralized investigative platform that enables division of labor, collaborative analysis, centralized case management and web-based review to dramatically streamline the investigative process. It leverages distributed processing to utilize additional hardware and increase case processing and resolution speed.

Beyond the extensive speed and scalability improvements, the 6.2 release also introduces new, exciting features:

- Log in to AD Lab with a **powerful, yet flexible HTML5 web interface** that works on any browser on any web-compatible device, including tablets and smartphones.†
 - Use a template-based approach with **purpose-driven user interfaces**, customizable by skillset and user type.
 - Leverage **enhanced administration controls** that allow you to manage access to specific data sets by user.
 - **Conduct powerful searches with extensive filtering**, such as linear searches, without the constraints of the index. Or use the **new single search bar** for quick, simple searching. Even **search within documents and within new, interactive search result visualizations**. Apply any of the new premade filters—visual charts or traditional checkbox filters—which can be configured by user skill set.
- Get **4X the processing speed** for near-instantaneous data analysis.
- Process even more data **with virtually limitless scalability**. We've tested scalability on up to 16 distributed processing engines with ease.

†Android and iPhone. Supported browsers include IE, Chrome, Firefox and Safari.

AccessData E-Discovery Solutions

AD eDiscovery® is an integrated, end-to-end platform that allows organizations to efficiently and seamlessly conduct enterprise-wide search, targeted collection, systemized preservation, litigation hold, processing, data assessment and complete legal review—all while keeping costs in line and reducing risk.

Summation® combines processing, review and case organization into a single product for the most cost-effective, accelerated e-discovery possible.

The 6.2 release of AD eDiscovery brings many customer-requested features and technology-driven improvements:

- **Get a top-level, comprehensive view** into the status of key functions through a new widget-based e-discovery dashboard—with the option to drill in for additional detail.
 - **See information at a glance** on collection, processing, litigation holds and document review jobs, plus get a real-time view of active users within the system.
 - **Set up email notifications** for common activities, such as when processing and collection jobs complete.
- **Connect and collect data from the most-used data repositories and cloud platforms**, including Microsoft® Office 365®, Box and more with the latest improvements to our more than 30 connectors.

The 6.2 release also features these new enhancements to both AD eDiscovery and Summation:

- **Stop a lengthy ingestion process in its tracks**—then go back and make changes or resubmit it with the appropriate criteria. Easily roll back and take out evidence from any and all locations.
- **Print faster and with better quality** using new PDF image printing capabilities for batch jobs.
- **Search by Bates number** in online review to quickly get your hands on specific documents.
- **Install and operate in environments that enforce FIPS algorithm policies** without needing to acquire potentially complicated security exceptions. AccessData 6.2 is refactored to use FIPS-compliant encryption classes (AesCryptoServiceProvider).
