

Be confident in your compliance— identify, assess and eliminate risk.

The stakes have never been higher for information security, compliance and technology leaders, who face growing compliance requirements and relentless threats to their data. Beyond a predicted increase in scrutiny due to regulatory changes, now 67 percent of CCOs and 82 percent of directors express concerns about personal liability.* To protect your organization—and yourself—from risk, and to constrain your data, you need to respond to the compliance landscape with speed and agility.

Introducing AD RTK™

Get ahead of the challenges to effectively and efficiently manage risk across the enterprise.

- **Take unprecedented control of your data**—easily find and remediate potential data compliance threats.
- **Gain visibility and deep insights across the enterprise**—access any device discreetly to search and destroy risks.
- **Reduce risk and automate remediation**—delete data, or gather images of data for defensive evidence in an investigation, in a powerfully integrated solution with limited data movement.

52% of companies surveyed named compliance as their top weekly conducted investigation.*

* IDG Survey, December 2016.

An Integrated Compliance Solution

AD RTK empowers you to conduct investigations and remediate risk with complete endpoint visibility in an integrated database solution. Protect evidence and keep chain of custody when you process, review and produce relevant information, all from a single system.

Protect Your Most Valuable Data

While you need a solution to stop a malware attack, most cybersecurity offerings today do not go beyond prevention to protect the specific data and files that are most meaningful to businesses, such as sensitive customer data or intellectual property. AD RTK enables you to respond swiftly and effectively to protect your organization's most important data across the enterprise.

- **Identify and locate data** using the proven, advanced search capabilities in AD RTK to search by file type, key words, hash values, metadata and more.

- **Inventory the software applications** installed on your organization's computers.
- **Conduct discreet investigations and forensically copy or collect suspect data**, without detection or interruption to work.
- **Delete non-compliant data or eliminate unapproved processes** to help assess, control and remediate risk and enable policy enforcement across the enterprise.
- **Report and share findings** on responsive files or emails across IT, information security, legal, compliance and audit teams to ensure collaboration and keep critical business stakeholders up to speed.
