

“We selected AccessData as our main forensics & review platform. The primary advantage is the seamless integration with FTK. This is a big plus in terms of the overall processing time and is very tangible in our daily work.”

—Kürşad Güney, Sr. Forensic IT specialist, Grant Thornton

Forensic Toolkit® (FTK®)

Recognized around the world as the Standard in computer forensic software, FTK® is the only court-cited digital investigations solution built for speed, stability and ease of use. Known for its intuitive interface, email analysis, customizable data views and stability, FTK lays the framework for seamless expansion so your solution can grow with your organization's needs.

One Shared Case Database. Unlike other products on the market, FTK is database driven. All data is stored in one case database, which allows teams to use the same data, reducing the cost and complexity of creating multiple case datasets. Best of all, you won't experience failures associated with memory-based tools. For example, if the GUI crashes, the processing workers can continue to process data.

- **Unmatched Processing Speed**—FTK is different from other solutions in that it processes data up front; you don't waste time waiting for searches to execute during the analysis phase. It's designed to provide the fastest, most accurate and consistent processing with distributed processing and true multi-threaded/multi-core support.

Benefit from the shared case database.

- **Indexing**—With a shared index file you can eliminate the need to recreate or duplicate the file, delivering consistent search results regardless of whether you are searching in FTK or Summation.
- **Deduplication**—Gain a more complete understanding of your data sooner with enhanced interoperability between FTK and Summation, ensuring both products are deduplicating data the same way.

Additional Capabilities Include:

- Easy Button for Processing—Easier and faster processing with pre-defined, one-click command options. With easy FTK processing options (e.g., e-discovery processing, forensic processing, etc.) simply click the “button” based on how you want to process the evidence.
- Volume Shadow Copy—Reliance on third-party software or manual methods is no longer needed; quickly identify and extract information from the Windows® shadow system files or set up directly within FTK.
- Optical Character Recognition (OCR)—Expand to other languages with the ability to choose which language before converting images to readable text. Further enhancements and bug fixes are also included.
- Internet Artifacts—Locate hard-to-find key evidence for parsing Dropbox™ artifacts left on machines.

Parse, review and analyze mobile chats including WeChat® and WhatsApp® on both phone and desktop chat application collections.

- **Cross-reference emails and phone numbers across data types**, and then **filter on the person of interest** in your evidence to connect the dots in your investigation.
- Provide a simplified view of FTK for end users with new administrator controls.
- Use **email threading** to save time, gain insights and understand data in the context of a conversation and how it applies to your case.
- **Recognize and parse keyword searches, destination lists, and shellbag, prefetch, volume shadow copy and SAM files** automatically on all modern operating systems.
- Quickly and easily **save and export your data** and analysis into .CSV or .HTML files.
- **Find deleted partitions easily, in more scenarios**, with the highly requested expanded support for partition types.

Support & Training

Our goal is to provide superior technical support, product training and development to ensure users achieve the most value from their technology investment.

Support options can be found at:

marketing.accessdata.com/Support and include:

- Telephone technical support
- A knowledge base portal containing solutions to common questions
- A discussion forum where users can post questions and find answers
- User guides, quick-reference guides and more!

Training options can be found at:

marketing.accessdata.com/ADTraining and combine a unique teaching methodology with state of the art technology. Options include in-person classroom, live online, or via our Learning Management System (LMS).

For access to LMS, visit:

marketing.accessdata.com/LMStraining

Whether it's for investigation, litigation or compliance, AccessData® offers industry-leading solutions that put the power of forensics in your hands. For 30 years, AccessData has worked with more than 130,000 clients in law enforcement, government agencies, corporations and law firms around the world to understand and focus on their unique collection-to-analysis needs. The result? Products that empower faster results, better insights, and more connectivity. For more information, visit www.accessdata.com
