

AccessData Known File Filter

Quick Installation Instructions

1. If this is a new Oracle installation, launch the product before installing KFF. For example, if you are installing FTK, make sure FTK has been launched at least once to automatically setup the database structure in Oracle prior to installing KFF.
2. On the computer where Oracle is installed, mount the KFF ISO file with a program such as MagicISO, or burn the ISO to a DVD and insert the disk into the drive on the Oracle computer.
3. Run the AccessData KFF Library 3.1.MSI file on the computer where the Oracle Database is installed.
4. Follow the prompts to complete the installation.

The KFF 3.1 data is stored in the Oracle database and will be used by AccessData products with a 3.1.x version number. For example, if KFF was installed with FTK 3.1.0, KFF does not need to be reinstalled when FTK is upgraded to v3.1.2.
