

PRTK 6.3.1 / DNA 3.3.1 Release Notes

We have posted a new release of PRTK 6.3.1/DNA 3.3.1 on our Website. To download the latest release, visit <http://www.accessdata.com> and click **Download**.

New Features

This version contains these new features:

Word Count Column The Dictionary Browser and Dictionary Info Dialogs now have a word count column in their display.

Tally Support Added a module for the Tally Solutions office and accounting programs.

Modifications and Enhancements

You will notice these enhancements in PRTK 6.3.1/DNA 3.3.1:

- This installation program will not allow PRTK and DNA to be installed on the same machine.
- License Manager and Language Selector now installed automatically.

Notable Changes

We've also included these changes in this release:

- All passwords are visible after a golden dictionary merge.
- When Merging dictionaries, the results for number of passwords merged and the total number of passwords is correct.
- The Dictionary Browser window shows the entire name of the dictionaries.
- Dictionary Utility now picks up the last item of a list without needing to end the list with a hard return.

Known Issues

You may notice these problems when using this release:

- The default value for Approximate Chunk Size in settings is set at one minute. You may see some performance increase by changing the default value to five minutes or more. This could result in slower feedback to the user, but increased passwords per second at the worker.
