

## FTK and AD Lab 7.0. Streamline and tackle mobile investigations.

Analyze more mobile application data than ever before and complete your investigations more rapidly

A digital forensics tool should do more than produce basic forensic evidence. Investigators have to make immediate, and very specific decisions, and a reliable tool is a necessity when it comes to analyzing data and building a strong case. That's why FTK and LAB 7.0 are designed to give you a broad range of features and functions that offer flexibility, scalability and customization with a powerful processing engine. Process **more than 7 TB of data in just 24 hours** in the new release!

Adding to the already strong backbone of FTK and AD LAB, the functionality included in the 7.0 release, mobile parsing, job management and many other features, makes FTK and AD LAB the premier tool on the market for full-scale forensic investigations. When you have the court validated tool of choice for digital forensics, you can experience what it feels like to have the advantage to bring criminals to justice.

**Parse key data from mobile applications** to further complete your investigation in one forensics tool. Analyze more data to paint a broader and more robust picture ensuring a more comprehensive investigation.

**Create custom parsers** via an open C# API that can be updated by AccessData or by you to create a more robust and complete data collection for your specific data types and sources.

**Run Python Scripting** directly within the FTK and AD LAB interface, eliminating the risk of data spoliation by keeping it all in one location.

**Easily process redesigned chat messages and conversations** to show them in their native view which allows key stakeholders to have a better understanding of the context.

**Achieve more flexibility and save money** by using the power of the cloud to scale your environment with AWS Aurora Support.

**Add or remove distributed processing engines** on the fly with auto-scaling, leading to better resource allocation.

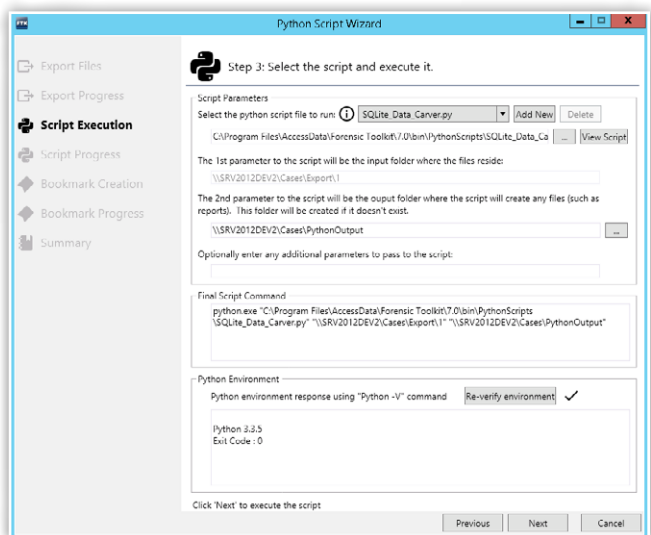

Chat beautification to show messages in their native view, allowing for better understanding and context.

Enhanced Image and Video processing support to help remove non-relevant data up-front to speed up searches. The All Communication features allows investigators to connect conversations from all sources (email, mobile, chat, etc.).

Create custom parsers and reports to easily search for and present complex analysis to non-technical stakeholders with Python scripting.

**EXPERIENCE THE POWER OF 7.0**
