

AD eDiscovery® + Relativity®:

New integration helps speed the e-discovery process from identification through document review

With the most robust collection capabilities available and built on the industry's most trusted, court-cited FTK® processing engine, AD eDiscovery® gives teams a forensically sound, totally integrated solution to more efficiently and cost-effectively manage the complete e-discovery process, from identification through first-pass review.

And now, through adding the ability to directly export data from AD eDiscovery into the Relativity® comprehensive platform for data review, users get a truly unmatched solution for managing the complete end-to-end e-discovery workflow.

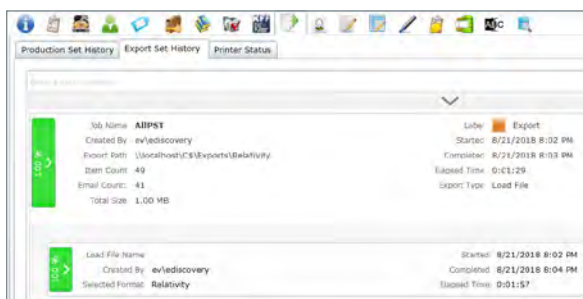

Here's how it works:

No more frustrating, time-consuming load files! When ready to move data from AD eDiscovery to Relativity, simply select "Direct Export into Relativity" from the available load file generation options.

Send data directly into a Relativity workspace. Enter your Relativity user credentials and specify an existing Relativity workspace. Then map the AD eDiscovery fields to the Relativity fields of the workspace you selected. The available template with 28 commonly used pre-mapped fields helps make the mapping process even easier and faster.

Complete Export History. Once fields are mapped, just click to export the files and metadata directly to your Relativity workspace—no load file needed! You'll get a comprehensive report of the export history once complete.
